robust and durable

State-of-the-art compressed air technology

ALMIG has emerged from a company with a long-standing tradition; its products have always stood for quality, innovation and mindfulness of customers.

This comprehensive know-how is particularly reflected in our piston compressor series, a compressor system for use under the toughest conditions in skilled trades applications as well as high-tech industries.

This piston compressor program from ALMIG offers you the ultimate in robust reliability, oil-free and oil-lubricated. Regardless of whether you work in low-pressure, mid-pressure, or high-pressure ranges.

Our products reflect state-of-the-art technology according to the latest research applicable in the field; it goes without saying that they are all manufactured according to the ISO 9001: 2000 / ISO 14001: 2004 / IRIS norms and conform to CE Directives.

The ideal entry into piston compressor technology

PRACTIC

PRACTIC 2.2 / 50

PRACTIC 2.2 / 100

Further advantages of the PRACTIC series are:

- Small, compact, easy to handle for any application
- Ready for operation with oil fill and connecting cable
- Complete valves and safety equipment
- Maintenance-free transmission of forces due to direct drive of electric motor and compressor block
- Extended service life of the compressor due to highly efficient cooling, use of high-quality materials and careful assembly
- Experience with more than 1,000,000 piston compressors produced per year

The field of applications of modern piston compressors is versatile – from crafts through to industry.

The PRACTIC series was developed specifically for professional applications and meets all the demands that can be made in the exacting everyday operation in this area.

In addition, it offers a flexible, mobile and reliable supply of compressed air – and is extremely efficient and economical.

The ideal solution for handcraft and commercial applications

HLE / HLE-S

The HLE compressors from ALMIG offer the optimal entry-level model for reliable compressed air supply.

They can be used everywhere to supply small amounts of compressed air either centrally or locally.

The top HLE-S series also gives you a super sound-insulated system with a sound pressure level of only 68 dB(A).

The "HLE package" includes:

- ready for operation, filled with oil, connecting cable
- complete fittings and safety devices
- dry air filter with air-intake grid
- robust metal V-belt protection screen
- high-quality pressure switch for automatic operation
- tank drain
- cylinder of grey cast iron as well as specially designed steel valves for long compressor operating life
- from 5.5 kW delivery possible with mounted delta-star starter (incl. main switch and running-time meter)

Air flow as per ISO 1217 annex C

Sound pressure level as per DIN 45 635 T13, 1m distance

¹ on wheels displaceable

² Compressor with star-delta switch cabinet

The Booster series in the power range 2.2 – 30 kW represents a comprehensive product mix of piston compressors whose main area of application is the post-compression of compressed air.

Boosters are employed wherever already pre-compressed air of up to 13 bar is available, or they are fed by a normal compressor on the intake side, and compress the air to the desired higher discharge pressure of maximal 40 bar in a second compression procedure – and this in a manner which is simple, safe, and without having to invest in a separate highpressure network.

ALMIG Boosters feature a compact design and a clear, service-friendly construction.

They are known for their efficient production of compressed air and long service life, also in 3-shift continuous operation.

The slowly running (speeds of up to 600 to 1450 min⁻¹) air-cooled compressors can be adapted to almost any kind of operating conditions due to their modular construction. The standard version is designed for pre-pressures between 5 and 13 bar. Other pre-pressures upon request.

Quality consciousness for commercial and industrial applications ... as built-in compressor ... on base frame ... on tank

HL

The well-conceived modular HL series offers the solution to all kinds of applications even under the toughest industrial conditions up to 40 bar.

This equipment sets new standards with regard to quality, operational reliability, service life and operator convenience.

ALMIG-HL pistons are renown for their efficient production of compressed air, also in 3-shift continuous operation.

The freestanding cylinders of grey cast iron have large cooling vanes and a powerful ventilator V-belt pulley, providing a highly effective cooling system for the lowest system temperatures and highest compressed air quality.

Air flow as per ISO 1217

at 8 bar operating pressure for systems with 10 bar
at 12 bar operating pressure for systems with 15 bar
at 30 bar operating pressure for systems with 35 bar

Further significant advantages of the HL concept are:

- low speed and piston speed
- large intake and pressure valves
- large intake and pressure lines

for high total system efficiency.

HL-base unit

HL on base frame

HL on tank

The AKK, AEK and AGK ranges are air-cooled, single or two-stage, direct drive compressors.

In sum, they offer quality, operating safety, a long working life and operating convenience to the same standard as large systems and guarantee highest reliability and high efficiency.

A well thought-out modular system of proven design

Their compact construction and a well thought-out modular system make these compressors very flexible in application – they are capable of being adapted individually and reliably to all operating conditions.

The modular system includes:

- units on base plate for free-standing operation
- compressed air systems with diverse horizontal or vertical tanks (also with coupled refrigeration dryer)
- with or without sound insulation box

These modules and the power classes allow efficient use of the compressors, aligned with the requirement of the moment round the clock.

Innovative engineering, optimum design

The ranges set the technical tone by:

- good driving and emergency running characteristics through the use of special cylinder materials
- optimum oil supply by operationally safe immersion pin lubrication, which even supplies the drive with the required volume of oil when operating at an angle
- optimum balancing and low piston speeds provide silent running
- optimum cooling, as cylinders, cylinder heads and valves are favourably placed in the cooling air current from the axial fan and thus the heat of compression is drawn off to best effect, which significantly enhances the working life and the servicing interval
- standard production models are fitted with generously dimensioned coolers

The direct-driven industrial solution ... also oil-free

AKK-O /
AGK-O

Oil-free pistons of the AKK-O and AGK-O series are used wherever absolutely no residual oil is permissible in the compressed air.

The following features distinguish the ALMIG run-dry compressors and guarantee high efficiency and long service life:

- all pressure tanks galvanized
- good mass balance
- low piston speed
- excellent cooling
- compressor directly flanged with motor
- frictionless, noncorroding valves
- no-maintenance storage with synthetic high-temperature fat

- compression rings and piston guide made of filled Teflon
- cylinder made of special AL alloy with wear resistant finish

This series is available in the well-conceived modular structural principle as:

- compressor equipment assembly to be built in
- as equipment assembly on base frame for freestanding installation
- as compressed air system with diverse horizontal or vertical tanks (also with coupled refrigeration dryer)
- as dual system
- with or without sound-insulation box

Total flexibility

You have the choice!

A-TOWER

The A-Tower series offers you the chance to configure your piston compressor to individually fit your own internal needs yourself. Whether

- oil-free or oil-lubricated,
- with a single equipment assembly or up to 3 assemblies for generating compressed air,

you can decide whether to cover your air flow needs

- in increments, thus optimally adapting to the actual current compressed air requirement, or
- maintain redundant capacity with the provision of further compressors/emergency compressors.

The advantages of the A-Tower lie in its modular design. The sound-insulated housing provides space for plug-in modules for up to 3 piston equipment assemblies of the AGK/AGK-O series.

No matter which design variant you select, you get ALMIG piston compressors of top-notch quality, engineered for 100 % active running time and hence totally geared to the hard demands of the industry. Make use of the opportunity to configure your compressor yourself.

Upgrades (up to max. 3 equipment assemblies) can naturally be implemented later upon request.

Purchased today, completed tomorrow – individually according to your needs.

The standard scope of delivery for this series comprises:

- Base load selective switching
- Safety valves per equipment assembly
- Running-time meter per equipment assembly
- Non-return valve per equipment assembly
- On/Off switch per equipment assembly
- Pressure gauge
- Zero-voltage contact

Additional options also available.

effective output measured according to ISO 1217 annex C; at 8 bar for 10 bar systems, at 12 bar for 15 bar systems

Products, Concepts, Solutions

Built on the needs of the customer

With our innovative system concepts we offer customised solutions for almost all applications.

Our endeavour lies not only in supplying compressors, we offer ourselves as a

competent system provider, who is able to offer solutions to all users of compressed air.

That does not only apply to the consultation and installation phase of your new compressor(s), but naturally continues in all areas of service, maintenance and visualisation.

Challenge us!

Screw compressors

- constant speed
2.2 – 500 kW/
5 – 13 bar
- variable speed
controlled and
direct drive
3 – 315 kW/
5 – 13 bar
- oil-free, with
water injection
15 – 55 kW/
5 – 10 bar

Piston compressors

- oil-free,
up to 10 bar
1.1 – 12 kW
- for normal
pressure up
to 10 bar
1.5 – 15 kW
- for medium
pressure up
to 15 bar
1.5 – 15 kW
- for high pressure
up to 40 bar
2.2 – 45 kW
- as a booster for an
input pressure up
to 15 bar and an
output pressure
up to 40 bar
2.2 – 30 kW

Blower

- at constant speed
1.5 – 55 kW
300 – 1000 mbar
- with speed
regulator and
direct drive
3.0 – 55 kW
300 – 1000 mbar

Turbo compressors

- oil-free,
up to 9 bar
65 – 370 kW

Complete accessories

- refrigeration
dryers
0.27 – 100 m³/min
- desiccant dryers
0.08 – 145 m³/min
- activated carbon
adsorbers
0.08 – 145 m³/min
- filters,
all particle sizes
0.5 – 225 m³/min
- complete
condensate
management up to
120 m³/min

Control, regulate, monitor

- lead-lag control
- consumption-
dependant
control
- visualisation
(we bring your
compressed air
to the PC)
- tele-monitoring
(the hotline of
your compressed
air station)
